Note (1) The input clock cycle-to-cycle jitter is defined as below figures. $T_{cl} = |T_1 - T_2|$

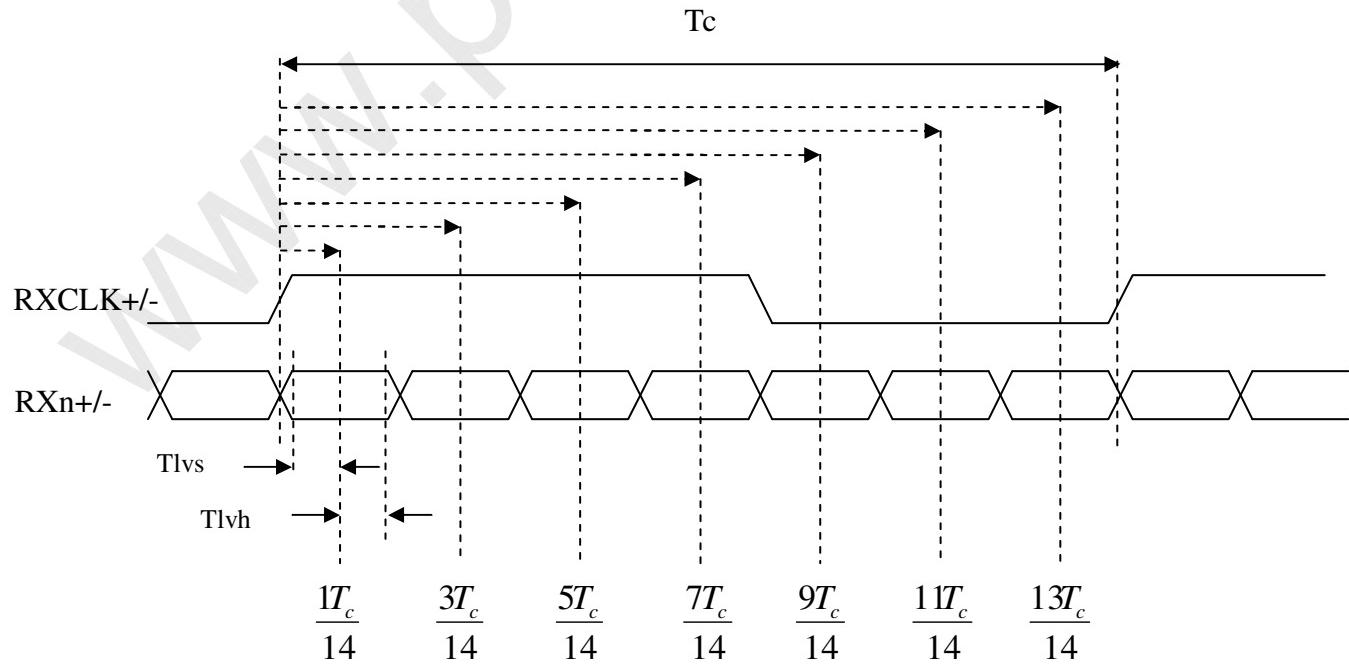

Note (2) The SSCG (Spread spectrum clock generator) is defined as below figures.

Note (3) The LVDS timing diagram and setup/hold time is defined and showing as the following figures.

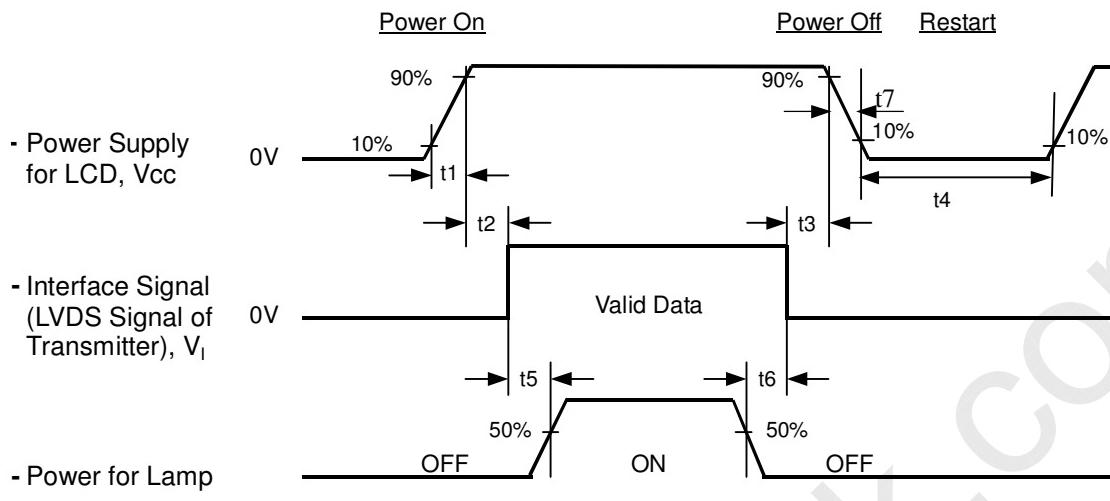

LVDS RECEIVER INTERFACE TIMING DIAGRAM

6.2 POWER ON/OFF SEQUENCE

To prevent a latch-up or DC operation of the product, the power on/off sequence should be as the diagram below.

Timing Specifications:

$$0.5 < t1 \leq 10 \text{ msec}$$

$$0 < t2 \leq 50 \text{ msec}$$

$$0 < t3 \leq 50 \text{ msec}$$

$$t4 \geq 500 \text{ msec}$$

$$t5 \geq 450 \text{ msec}$$

$$t6 \geq 90 \text{ msec}$$

$$5 \leq t7 \leq 100 \text{ msec}$$

Note.

- (1) The supply voltage of the external system for the Open cell input should be the same as the definition of Vcc.
- (2) Apply the lamp voltage within the LCD operation range. When the backlight turns on before the LCD operation of the LCD turns off before the backlight turns off, the display may momentarily become abnormal screen.
- (3) In case of VCC = off level, please keep the level of input signals on the low or keep a high impedance.
- (4) T4 should be measured after the product has been fully discharged between power-off and on period.
- (5) Interface signal shall not be kept at high impedance when the power is on.
- (6) CMO won't take any responsibility for the products which are damaged by the customers not following the Power Sequence.
- (7) There might be slight electronic noise when LCD is turned off (even backlight unit is also off). To avoid this symptom, we suggest "Vcc falling timing" to follow "t7 spec".

Note (0) Light source is the standard light source "C" which is defined by CIE and driving voltages are based on suitable gamma voltages. The calculating method is as following :

1. Measure Module's and BLU's spectrums. White is without signal input and R, G, B are with signal input. BLU(for M215H3-LA1) is supplied by CMO.
2. Calculate cell's spectrum.
3. Calculate cell's chromaticity by using the spectrum of standard light source "C"

Note (1) Light source is the BLU that is supplied by CMO and driving voltages are based on suitable gamma voltages.

Note (2) Definition of Viewing Angle (θ_x , θ_y):

Note (3) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

$$\text{Contrast Ratio (CR)} = L_{255} / L_0$$

L255: Luminance of gray level 255

L0: Luminance of gray level 0

$$\text{CR} = \text{CR} (5)$$

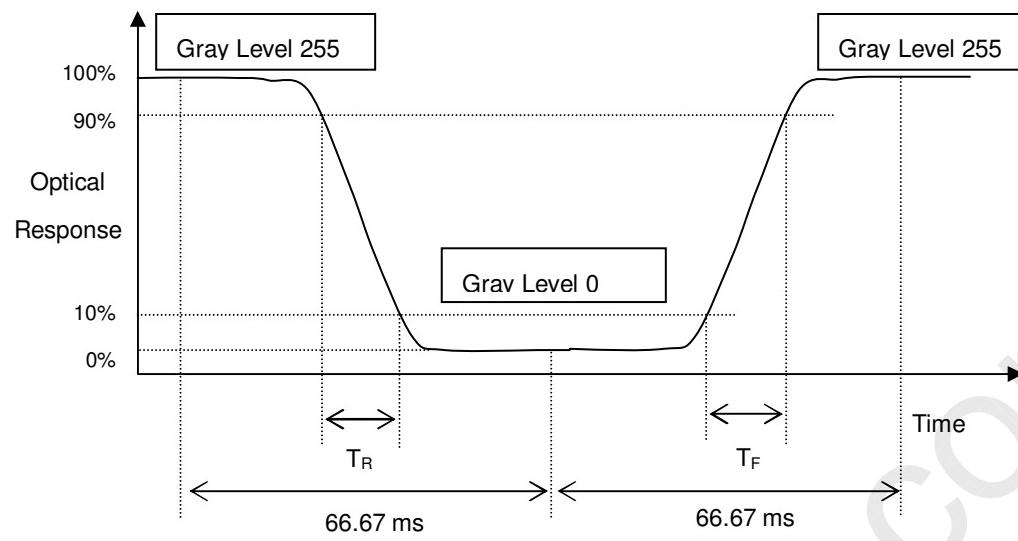

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (8).

Issued Date: Mar,26, 2010
Model No.: V215H1-PE1

Approval

Note (4) Definition of Response Time (T_R , T_F):

Note (5) Definition of Transmittance (T%):

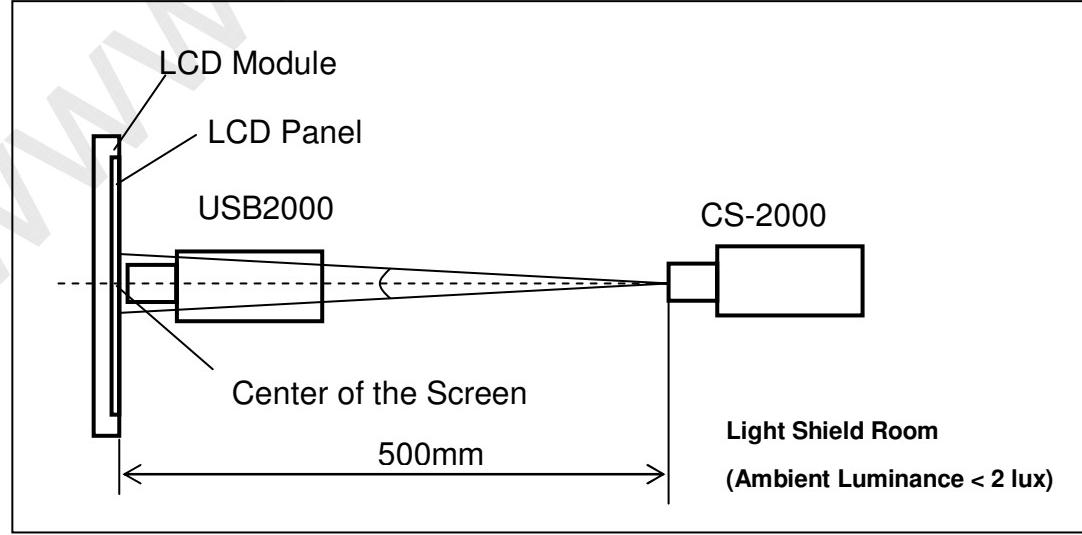

Module is without signal input.

$$\text{Transmittance} = \frac{\text{Luminance of LCD module } L(5)}{\text{Luminance of backlight } L_{BLU}(5)} * 100\%$$

$L(X)$ and $L_{BLU}(X)$ is corresponding to the luminance of the point X at Figure in Note (8).

Note (6) Measurement Setup:

The LCD module should be stabilized at given temperature for 30minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 30minutes in a windless room.

Note (7) Measurement Setup:

The LCD Panel should be stabilized at given temperature for 30 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after light source "C" for 30 minutes in a windless room.

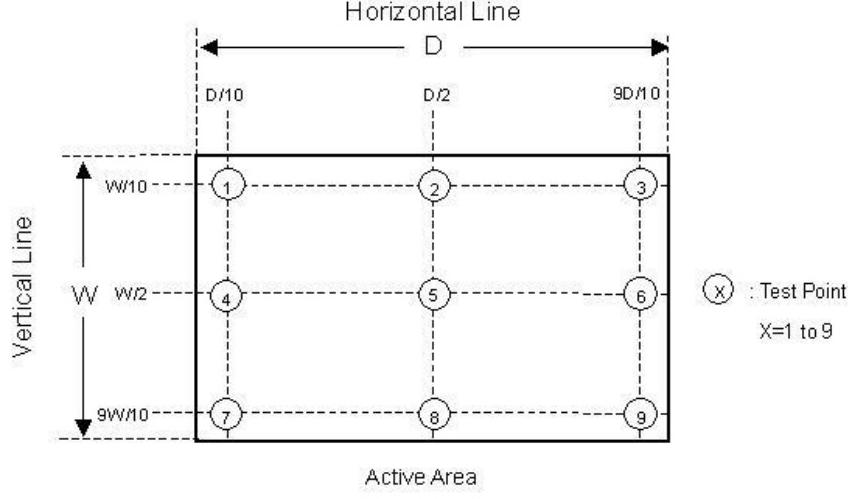

Note (8) Definition of Transmittance Variation ($\delta T\%$):

Measure the transmittance at 9 points

Maximum [T%(1), T%(2), ... T%(9)]

$$\delta T\% = \frac{\text{Maximum} [\text{T}\%(1), \text{T}\%(2), \dots \text{T}\%(9)]}{\text{Minimum} [\text{T}\%(1), \text{T}\%(2), \dots \text{T}\%(9)]}$$

11. PRECAUTIONS

11.1 ASSEMBLY AND HANDLING PRECAUTIONS

- (1) Do not apply rough force such as bending or twisting to the product during assembly.
- (2) To assemble or install module into user's system can be only in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.
- (3) It is not permitted to have pressure or impulse on the product because the LCD panel will be damaged.
- (4) Always follow the correct power sequence when the product is connecting and operating. This can prevent damage to the CMOS LSI chips during latch-up.
- (5) Do not pull the I/F connector in or out while the module is operating.
- (6) Use a soft dry cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.
- (7) It is dangerous that moisture come into or contacted the product, because moisture may damage the product when it is operating.
- (8) High temperature or humidity may reduce the performance of module. Please store this product within the specified storage conditions.
- (9) When ambient temperature is lower than 10°C may reduce the display quality. For example, the response time will become slowly.

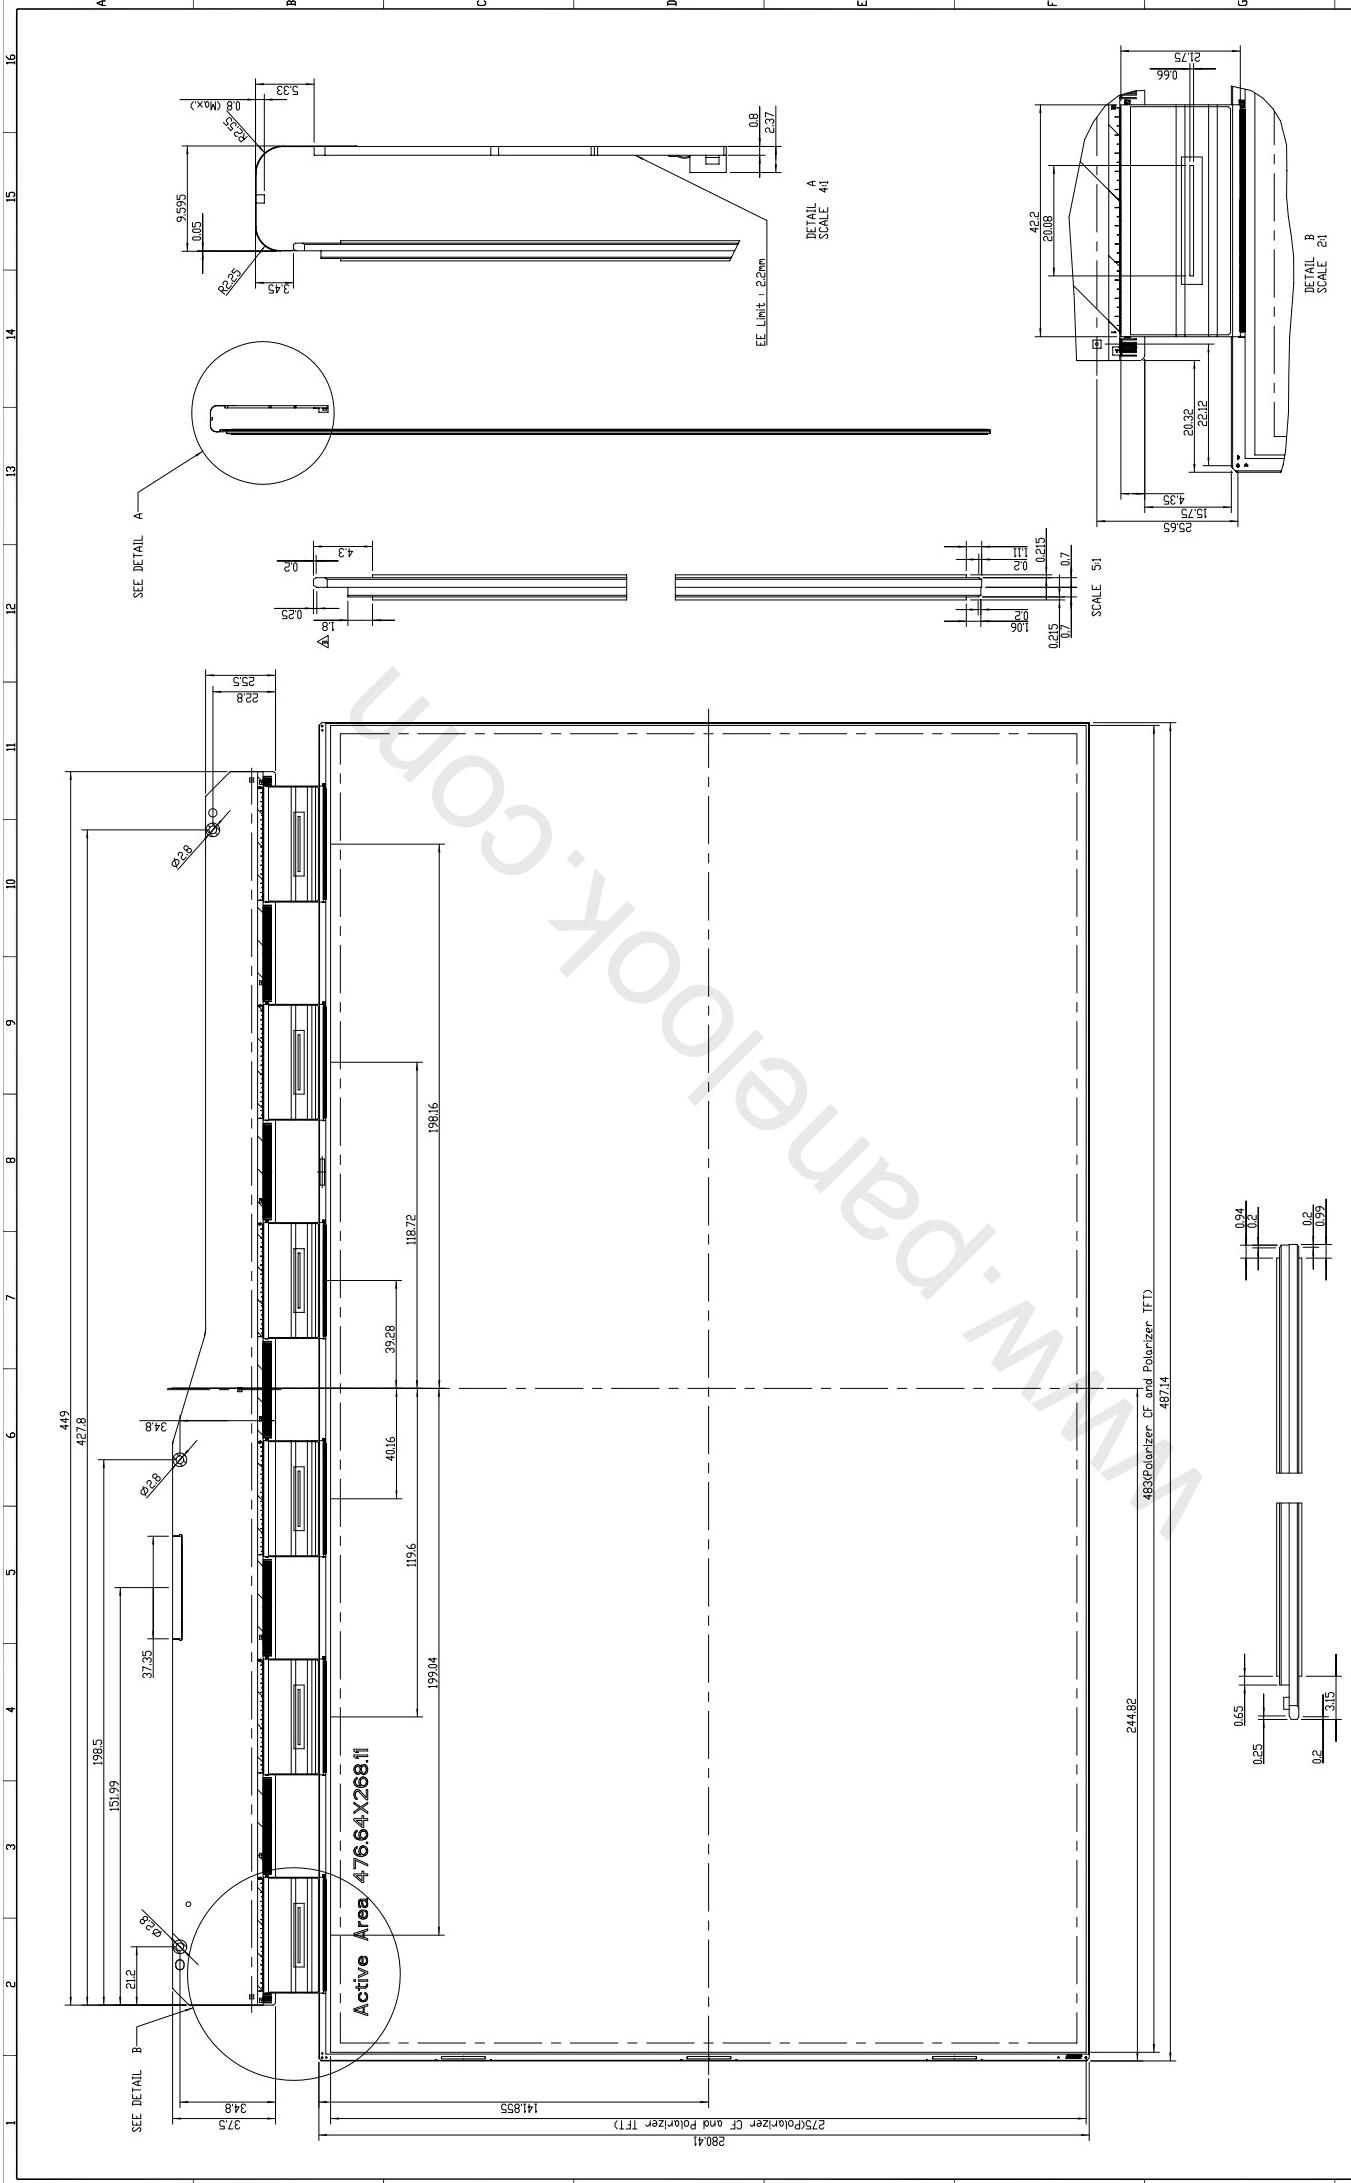

11.2 SAFETY PRECAUTIONS

- (1) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- (2) After the product's end of life, it is not harmful in case of normal operation and storage.

11.3 OTHER

- (1) When fixed patterns are displayed for a long time, remnant image is likely to occur.
